◆ **New Screen Magazine**
No. 78.

One Reel

BALSA, a native tree of the tropics, has been introduced to commercial use. The wood is two and a half times lighter than cork and is used extensively by the government for making rafts and mine buoys and is immensely valuable for making all sorts of floating devices.

Dr. Hereward Carrington, in cooperation with "Popular Science Monthly" makes an interesting expose of the fraudulent methods used by would-be spiritualists who flourish in great profusion nowadays.

An American explorer, Dr. William has probably the only collection of "good flowers" in the United States. They are not really flowers but are growth put forth by parasites to protect their lives from parasites and were found at the crater of a Central American volcano after weeks of exposure at enormous bodily risk. The issue of the magazine closes with an assorted collection of humorous quips.
